

WORLD GIVING INDEX 2024

GLOBAL TRENDS IN GENEROSITY

FOREWORD

“By making sure the right building blocks are in place, we can grow giving and community engagement to work towards a vibrant civil society in every country.”

NEIL HESLOP, OBE
Chief Executive of the
Charities Aid Foundation

The generosity of people the world over is evident in this year’s Charities Aid Foundation (CAF) World Giving Index. In response to a year of continued economic and humanitarian challenges, the research finds that people from across continents and cultures remain ready to help those in need.

Surveying over 145,000 people across over 140 countries last year, the fourteenth edition of the World Giving Index demonstrates how people have not only maintained the time they spend volunteering, but also that increasing numbers are donating money and providing help to strangers. The global index score is at its joint-highest level, only previously matched during the pandemic.

Indonesia once more tops our World Giving Index rankings, alongside a top 10 drawn from nations throughout Africa, Oceania, Asia, Europe, the Middle East, and North America – with 73% of the world’s population giving time, money, or helping a stranger last year.

By looking at Singapore, we can see how government efforts may be helping to increase charitable activity. The country has significantly increased its rates of volunteering and giving, rising 19 places to third place in this year’s index. Recent government initiatives include new schemes to encourage deeper partnerships between charities and businesses on volunteering, as well as tax relief and government matching on charitable donations.

For these success stories to be replicated globally, governments should make it easy to give and support efforts to build resilient civil society organisations. By making sure the right building blocks are in place, we can grow giving and community engagement to work towards a vibrant civil society in every country.

For 100 years, the Charities Aid Foundation has worked to connect donors to charitable causes around the world. Our World Giving Index provides us with an opportunity to celebrate global generosity, share the knowledge and experience that has brought us to this point, and look to the future with renewed optimism.

AT A GLANCE

WORLD GIVING INDEX 2024

Six key facts drawn from our unique research into how people engage in social and charitable activities around the world.

#1

The ranking that Indonesia takes for the seventh year running, having first overtaken Myanmar in 2017.

4.3BN

The number of people who gave their time, money, or helped someone they didn't know in 2023 – equivalent to 73% of the world's adult population.

75

The number of countries that improved their World Giving Index score in 2023.

15 Points

The increase for this year's biggest riser, Greece. This year's biggest faller is Azerbaijan.

#22

The UK's ranking in 2024, having fallen out of the top 20 for only the second time. The UK has been trending downward for the past decade.

800%

The increase in the percentage of Moroccans who donated money, following the severe earthquakes in September 2023.

ABOUT THE RESEARCH

145,702

The number of people surveyed in 2023. Interviews took place through Gallup's World Poll.

142

The number of countries included in our research, representing more than 95% of the world's population.

2M+

The total number of respondents included since we first conducted this research in 2010.

THREE KEY QUESTIONS

The survey asked three questions about what people had done in the past month.

1 Have you donated money to charity?

2 Have you helped a stranger or someone you didn't know who needed help?

3 Have you volunteered your time to an organisation?

CALCULATING THE INDEX

An average of the positive responses is calculated for each country, giving an index score and a global ranking. A higher index score indicates that more of that country's population is engaged with giving. The lowest possible score is zero points and the highest possible score is 100 points.

This report is part of CAF's *Inside Giving* series. Visit our [new online hub](#) that brings together all our data and insight on giving and philanthropy.

WORLD GIVING INDEX SCORES

The global average index score is 40 points, back to its joint-highest level since 2021.

THE 10 MOST GENEROUS COUNTRIES IN THE WORLD

Indonesia is once again the world's most generous country.

Indonesia ranks first on the World Giving Index for the seventh year running, having first overtaken Myanmar in 2017. As many as nine in 10 Indonesians donated money to charity, and more than six in 10 volunteered their time – the country tops the global league tables for both of these behaviours.

Malta joins the top 10 for the first time ever. It has an index score of 54 points, up five points on last year, driven mainly by an increase in donating money.

REGION BY REGION

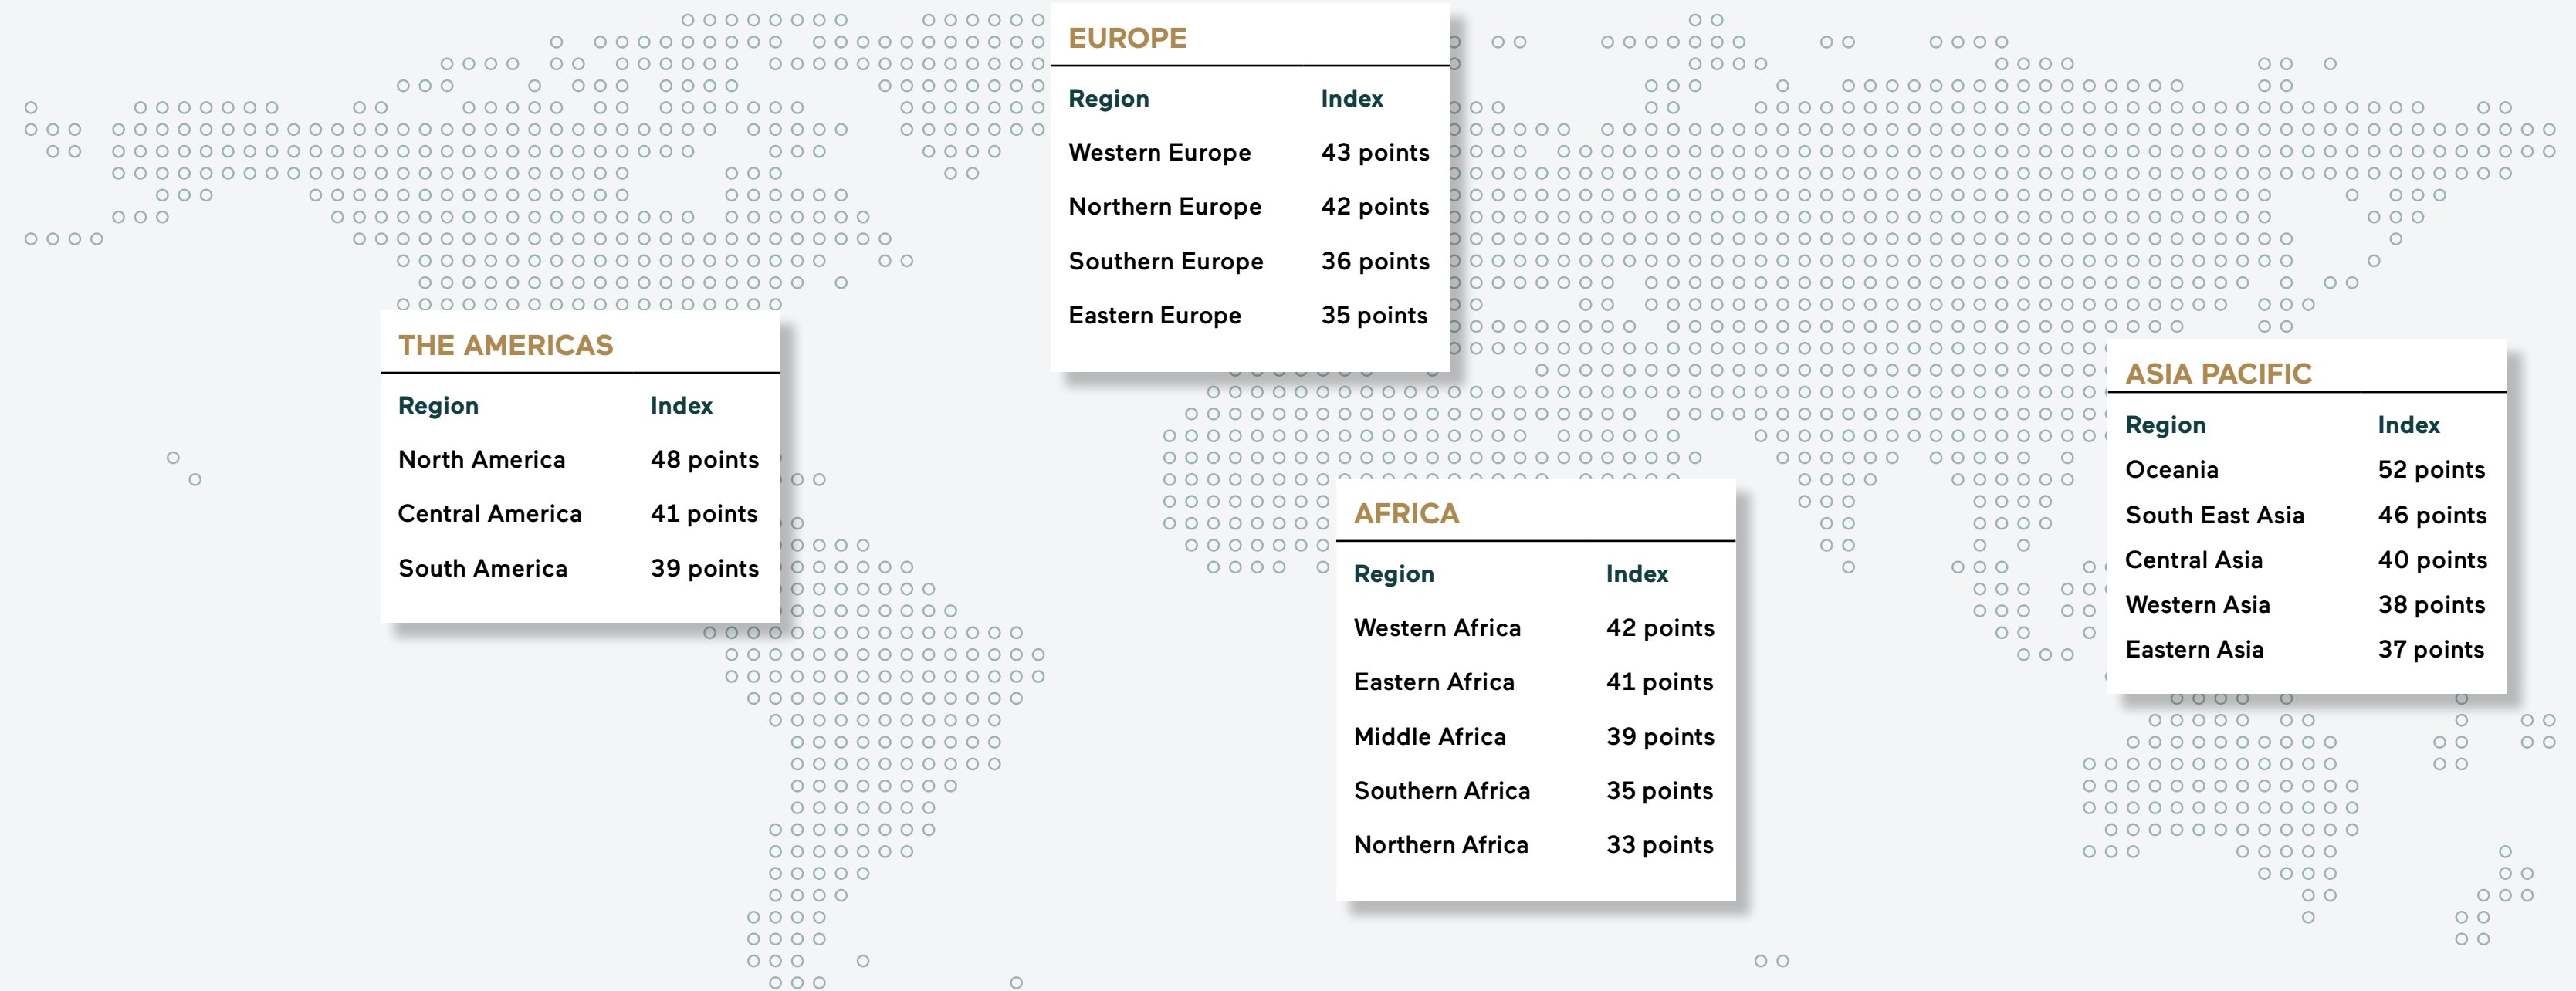

Oceania, North America and South East Asia are the most generous regions in the world, each scoring well above the global average of 40 points.

Across all the regions, the highest-scoring regions tend to have greater levels of life satisfaction and civic participation.^{1,2} The top performing region – Oceania – records among the highest life-satisfaction ratings in the world.³

Exceptions include South East Asia, where civic participation is low and life-satisfaction ratings are moderate. Widespread religious giving is likely to be a contributing factor to the region's high levels of generosity.

Southern and Eastern Europe are two further exceptions, being among the least generous in the world despite relatively high life-satisfaction ratings. On generosity measures, Southern and Eastern Europe fall behind Northern and Western Europe, instead scoring on a par with Southern Africa – where life-satisfaction ratings are among the lowest in the world.

BEHIND THE RANKINGS

BIGGEST MOVERS

Between 2022 and 2023, the top three biggest risers were Greece, the Philippines and Singapore.

While all saw an improvement across the board, Greece had the largest year-on-year increase in the world for helping a stranger and Singapore recorded the biggest global increase for volunteering. Although it is not included in the year's overall biggest movers, Morocco saw the world's largest year-on-year increase in donating money. In total, 75 countries improved their overall score, 51 saw a decline and 16 were unchanged.

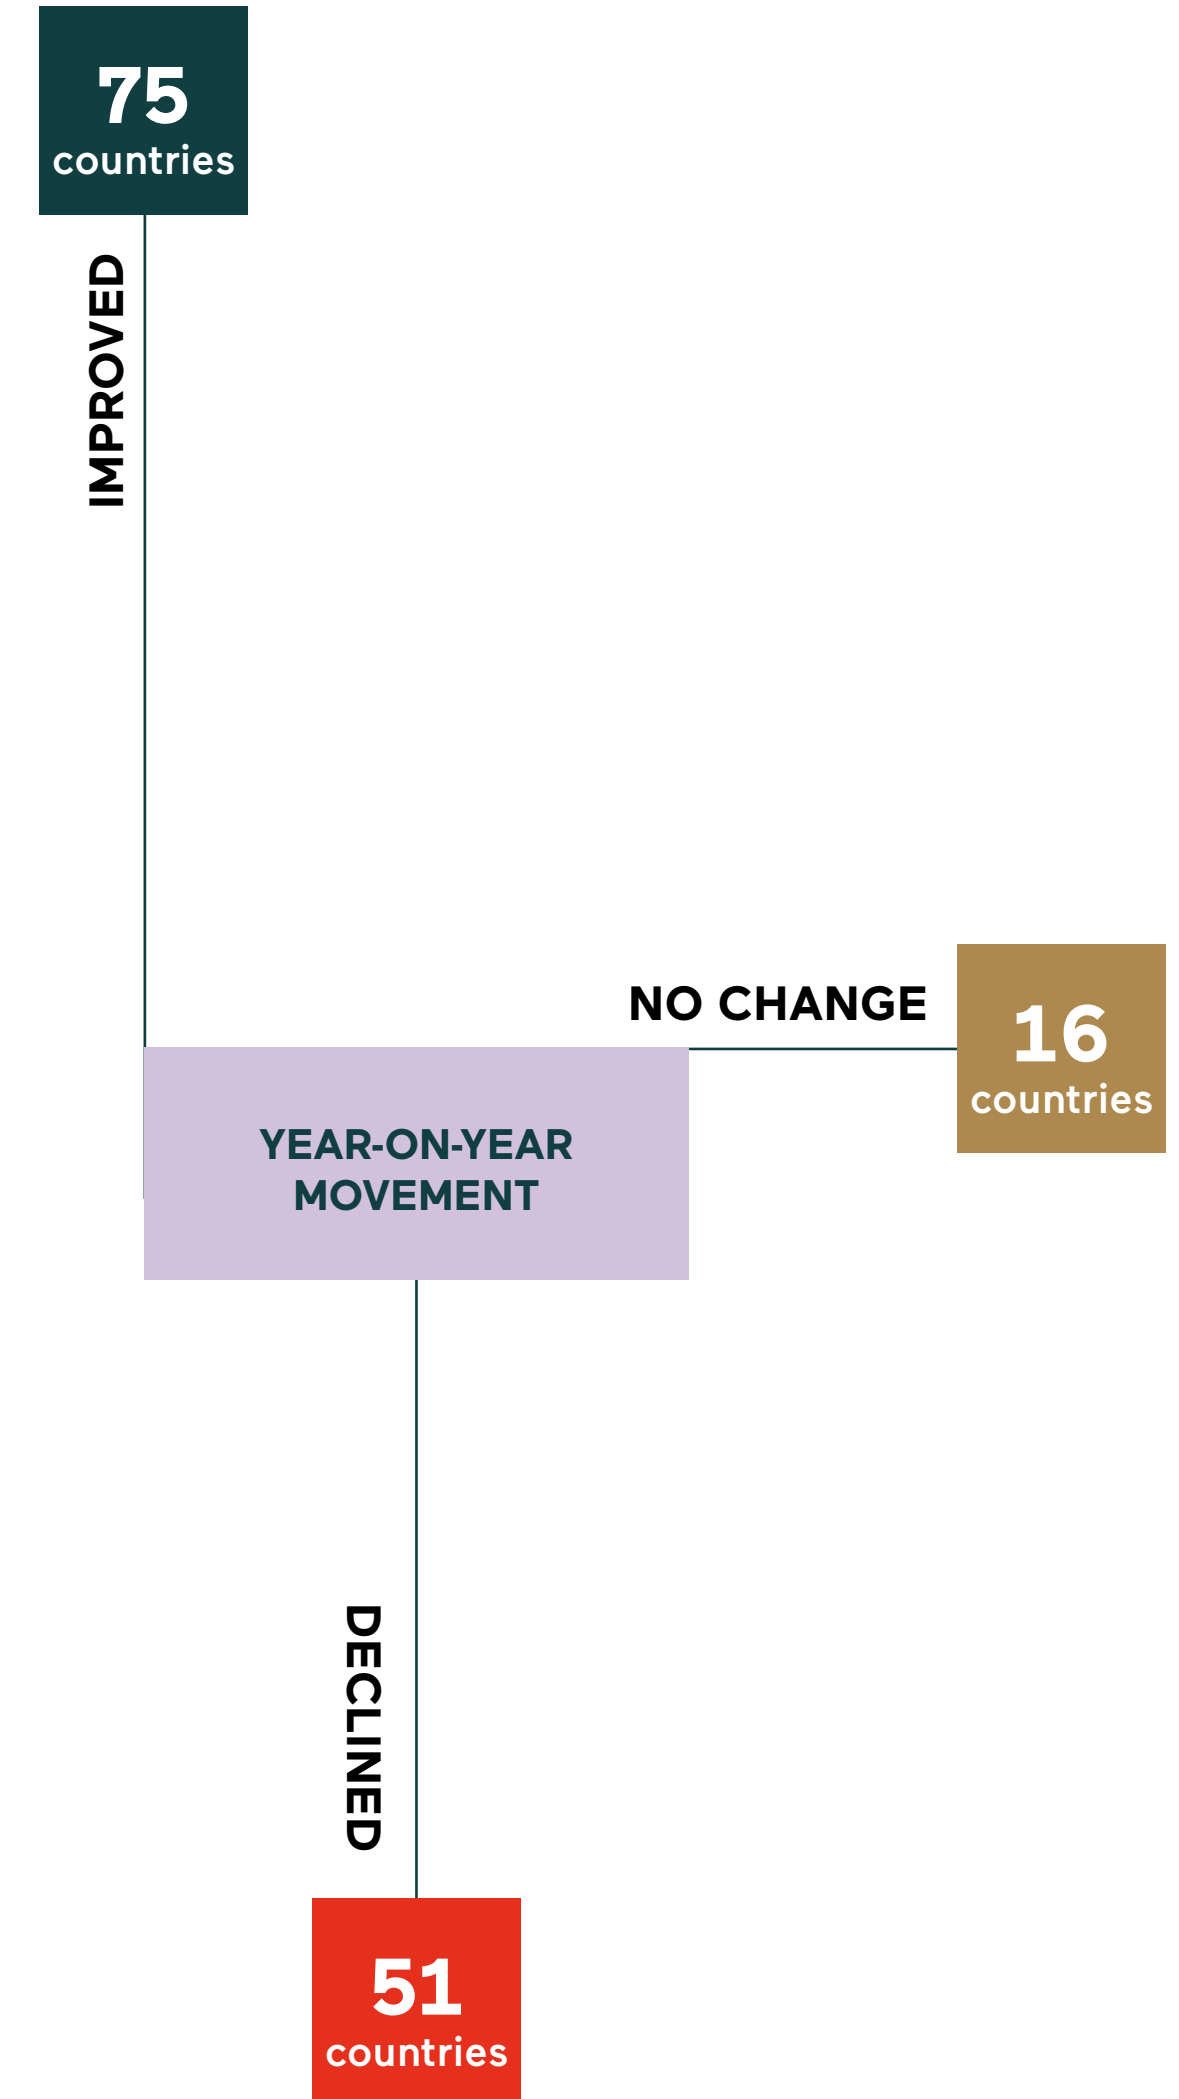

This year's biggest faller is Azerbaijan. It has fallen 65 places on the index since last year, and now ranks 119th in the world.

Over the long term, Ukraine, Indonesia, Chad, Russia, and China are the most improved, each having recorded an increase of 25 points or more over the last decade.

Over time, China has seen the largest change of all. Its index score is three times higher than it was 10 years ago, and it has moved up the ranking by 49 places in that time. Over the last decade, the country has recorded a 388% increase in the proportion of people who donated money and a 441% increase in volunteering time.

The Chinese Government made major changes to the regulation of charities in 2016 that liberalised the sector. Prior to these changes, 'social organisations' had previously required a government sponsor, had to submit to annual inspections, and were not allowed to raise funds from the public without being designated a 'Public fundraising foundation'.¹

After the 2016 Charity Law was passed, social organisations could register as charities, carry out public fundraising and no longer needed government sponsors or inspections. The sector has grown in the intervening years and the country now has at least 13,000 registered charities, although this remains relatively few considering China's size and population (by way of comparison, the UK has around 200,000 registered charities).²

² China Development Brief

THIS YEAR'S BIGGEST RISERS

GREECE

+15 points

This year's biggest riser is the country that gave us the word 'philanthropy' (from the Ancient Greek *philanthrōpía*, meaning 'love of humanity').

Greece's index score has been on an upward trajectory since 2013, when the country was in the depths of its sovereign debt crisis. It has a particularly high score for helping a stranger – significantly above the European average and particularly high among young people.

Interviews took place around the same time as the Messenia migrant boat disaster (in which at least 500 people were thought to have died off the coast of Pylos) and during a year that saw a 159% increase in refugee arrivals to the country.¹

THE PHILIPPINES

+13 points

The Philippines saw a substantial increase in generosity during the peak pandemic years. While generosity decreased in 2022, it has returned to the high levels seen in 2021, making it one of this year's top three biggest risers.

The Philippines has an overall score of 47 points and ranks #30 on the index.

SINGAPORE

+12 points

This year sees Singapore enter the top 10 for only the second time, having been on an upward trend since 2018.

In 2023, the country recorded its highest ever scores for donating money and helping a stranger, in addition to achieving the largest increase in volunteering seen in this year's data. Its index score is up 12 points to 61 points.

"In 2023, we saw an impressive rebound in support of civil society organisations in Greece as public levels of trust increased, following a challenging year for the sector.

"Last year also saw the Messenia boat incident that cost the lives of more than 500 people, followed by natural disasters of continued wildfires, and then floods in the Thessaly region. These incidents brought into the spotlight how vulnerable people can be and a desire to demonstrate solidarity.

"This has led to more and more people donating time, money and products. To a smaller degree, we have also seen a positive impact from an increase in the tax incentives when donating to Greek civil society organisations. We are hopeful this trend will continue in the future."

FOCUS ON SINGAPORE

The Singapore Government sends strong signals that it wants to grow giving

Singapore moves up 19 places to rank 3rd in this year's World Giving Index. This represents both its highest ever ranking and its best ever overall index score of 61 points, up from 49 points in 2022.

Donating, volunteering and helping a stranger were all more prevalent in 2023. But, a higher rate of volunteering contributed the most to the overall improvement, while helping a stranger contributed the least. Recent research by Singapore's National Volunteer and Philanthropy Centre (NVPC) found a similar increase in volunteering, which it attributes to a post-pandemic rebound, particularly among young people.¹

The positive results for Singapore follow the Government's recent initiatives to bolster philanthropy in the country. One such initiative is Singapore's Corporate Volunteer Scheme, which encourages deeper partnerships between charities and businesses through the provision of tax relief on employee volunteer time.

The World Giving Index shows that significantly more Singaporeans are donating money in recent years (up 45% since 2021). Singapore operates a generous tax benefit scheme for donations that effectively amounts to a relief rate of 250% – for every dollar that is donated to a government-approved charity, taxable income is reduced by SGD \$2.50.²

The Change for Charity initiative encourages Singaporeans to make spontaneous point-of-sale donations that are then matched by the Government from a SGD \$20 million fund.

For high-net-worth donors, new tax rules for the family offices of the wealthy means that substantial tax deductions can be claimed for overseas donations.

"We are heartened by the significant improvement in Singapore's ranking in the 2023 World Giving Index. The results appear to be consistent with what we have been seeing through our research. Since the pandemic, not only has the Singapore Government provided timely and supportive interventions to enable giving amid shifting trends in donation and volunteering, but the community has also stepped up and found innovative ways to channel resources to a range of causes and charities, via structured programmes or ground-up initiatives.

"We will continue to build on efforts that bring the public, private and people sectors together to nurture a culture of giving, where every contribution, large or small, brings us closer to our vision of Singapore as a City of Good."

TONY SOH

Chief Executive,
National Volunteer And Philanthropy Centre, Singapore

FOCUS ON MOROCCO

Moroccans responded to 2023 earthquake disaster in large numbers

Donation levels in Morocco increased 800% in 2023, as people responded to the devastating earthquakes that hit the centre of the country in September of last year. In 2022, just 2% of people donated money to charity, this rose to 18% in 2023.

The number of Moroccans who volunteered their time also doubled in the wake of the disaster, from 8% in 2022 to 16% in 2023.

The interviews took place between mid-September and mid-October 2023, in the immediate aftermath of the 6.8 magnitude earthquake, which killed more than 2,900 people.

800%

The increase in the percentage of Moroccans who donated money, following the severe earthquake disaster in September 2023.

2X

Volunteering rates doubled in the wake of the tragedy.

“Natural disasters and conflict disproportionately affect the world’s poorest – a problem that is only exacerbated by climate change. Local people and communities often rally to respond in the aftermath of a disaster; but in some cases, events may have severely damaged civil society infrastructure, limiting a community’s ability to respond. It’s important for donors to support communities for the long-term as they recover from disasters, rebuild and invest in the future. Building community resilience is critical to minimizing the effects of future crises.”

BROOKS REED
Vice President, Thought Leadership & Philanthropy at CAF America

CAF America is committed to providing nonprofits and donors with the network and infrastructure to respond to the immediate and long-term needs of communities facing crisis. To better meet that need, we have developed the Global Relief Navigator, a tool that provides donors in the US with a real-time map of partners that are responding to current crises, to which they can safely give. Sign up to hear about the [Global Relief Navigator](#) when it launches.

FOCUS ON THE UNITED KINGDOM

United Kingdom falls back to lowest ranking

The UK has fallen out of the top 20 for only the second time, since we began compiling the index at the height of the financial crisis in 2009. It now places 22nd in the global index, its joint-lowest ranking.

The UK previously fell to 22nd in 2020, when much charitable activity was severely hampered by pandemic measures. It has struggled, however, to regain the same levels of generosity seen before Covid-19 – having only once fallen out of the top 10 before then.

The UK's index score has trended down over the past decade, with all three scores sitting between six and eight points lower than they were in 2014. Its overall index is now 49 points, down from a high of 57 points recorded ten years ago.

#22

The UK's global ranking, its joint lowest since we began collecting data.

Some other typically high-scoring countries have been able to regain momentum in recent years – Ireland, for example, has taken a similar trajectory to the UK, but it increased its score for donating money in 2023. Similarly, Australia also saw decreased scores during the pandemic, but was able to improve in 2023 and move six places up the index. In contrast, the UK has dropped four places in the global rankings for donating money, typically, the most popular way for people in the UK to support charities.

In separate polling for the Charities Aid Foundation, only a quarter (25%) of the UK public thinks the country has become more generous over the last 100 years, while two in five (41%) think the UK's generosity has declined or was never especially generous to begin with.¹

41%

The proportion of people who say the UK is not, or never was, a particularly generous country.

¹ Polling was conducted online by YouGov on behalf of CAF. The sample was nationally representative and included 1,007 people aged 16+. Interviews took place from 21 to 26 May 2024.

RANKING OVER TIME

GROWING GLOBAL GIVING

CAF's World Giving Index offers unparalleled insight into global trends in generosity. It aims to support growth in global giving by enriching our understanding of how people engage in social activities for the benefit of their communities.

CAF is proud of the role we play in supporting charities around the world, enabling donors to make a greater impact. In our 2022/2023 financial year, CAF distributed more than £1bn on behalf of our donors to charities in 119 countries. A fifth of those donations moved across borders, originating in the UK, the United States and Canada.

We continue to call upon governments, policymakers and international funders to ensure the building blocks are in place to enable cross-border giving, and to create sustainable, resilient local giving structures.

Governments need to:

- Make sure that civil society organisations are regulated in a fair, consistent and open way.
- Make it easy for people to give, including cross-border giving, and offer incentives for giving where possible.
- Promote civil society as an independent voice in public life and respect the right of non-profit organisations to speak out on important issues.

International funders need to:

- Fund the development of infrastructure that can continue to generate funds for civil society even after aid ends.
- Fund local organisations directly to improve the accountability and efficiency of aid.
- Recognise the importance of helping grantees to build sustainable domestic support and fund accordingly.

Civil society organisations need to:

- Ensure good governance and be transparent about impact to build public trust, articulating impact in terms of the UN Sustainable Development Goals where appropriate.
- Meaningfully partner with local communities so decision-making is locally owned.
- Recognise and build on traditional forms of giving to create organisations and a culture of giving that complements the strengths of the local context.

142	Poland	15	23%	15%	7%

Index scores are shown to the nearest whole number but are calculated to two decimal places. This means that some countries that appear to have the same score may rank differently.

The CAF World Giving Index is based on data from Gallup's World Poll, which is an ongoing research project carried out in more than 100 countries. For detailed information on the World Poll methodology, click here: <https://news.gallup.com/poll/165404/world-poll-methodology.aspx>

THE CAF INTERNATIONAL NETWORK

The Charities Aid Foundation consists of CAF in the UK, CAF America and CAF Canada. We are also proud to partner with a growing number of independent philanthropic organisations across the world.

Our CAF International Network partners are experts in their region and together, we work to encourage effective and compliant giving to anywhere in the world. We share regional expertise on pressing causes and innovative solutions to promote philanthropy to enable agile, targeted interventions where there is greatest need.

ABOUT CAF

The Charities Aid Foundation (CAF) exists to accelerate progress in society towards a fair and sustainable future for all. Over the last 100 years, we have led the way in developing innovative approaches to giving. Annually, we distribute over £1 billion to charities around the globe.

As a leading charity operating in the UK and internationally, CAF works at the centre of the giving world. We partner with corporate and individual donors to enable them to give more effectively, strategically and impactfully. This includes connecting them to charities globally and providing access to our in-depth sector knowledge, governance expertise and innovative giving solutions.

We help charities to strengthen their resilience and do more of their life-changing work, through our strategic advisory services, tools to support charities' fundraising activities, and charity financial services from CAF Bank Limited and CAF Financial Solutions Limited. Using our research, policy and campaigns work, we understand and influence the wider environment for charities and donors.

Together, we give more.

100 YEARS OF CAF
